

# Endometriosis in the Workplace

Endometriosis Australia has supported the efforts of Southern Cross University and Western Sydney University's NICM Health Research Institute to conduct a national survey of **389** women\* with a confirmed diagnosis of endometriosis.

The purpose: to examine the impact of endometriosis on an individual's career and how workplace changes may influence management of endometriosis.

**389**

**Endo Warriors**  
from Australia  
responded to the  
survey.

Nearly all women with endometriosis had identified that their management of endometriosis had **significant** impact on their work life.

**70%**

of Endo Warriors have to take  
**unpaid** time off work to manage  
their endometriosis symptoms.

**50%**

of Endo Warriors said the **lack of flexibility** in the workplace was a significant problem.

Women with endometriosis have often suffered these symptoms in **silence**, and have often been **excluded from work and social activities** due to their endometriosis. Many Endo Warriors are also fearful of raising the issue in the workplace.

**1 in 3**

Endo Warriors have been **passed over for promotion** due to their endometriosis.

**1 in 6**

Endo Warriors have **lost their jobs** due to their endometriosis.

Workplace changes as a result of COVID-19 have proven beneficial for those with endometriosis.

**79%**

of Endo Warriors reported that work from home changes had made **management of their endometriosis symptoms** easier.

**60%**

of Endo Warriors said they were **more productive** while working from home.

**90%**

of Endo Warriors thought **flexibility** in relation to time management and working from home was the most important factor that could improve **management of endometriosis** in the workplace.

Other important interventions identified to **improve** the management of endometriosis in the workplace:

Introduction of 20-minute rest periods

Access to healthcare services such as counselling, mindfulness or assisted exercise

Access to healthcare benefits

Access to physical aids such as ergonomic chairs, heat packs, and props.
